EDUCATION

University of Houston-Clear Lake

Bachelor of Science in Computer Science

Expected Graduation: December 2026

GPA: 3.7

Relevant coursework: Programming Language Concepts, Advanced Data Structures and Algorithms, Computer Organization and Architecture, Software Engineering, Modern Software Design Development, Machine Learning.

PROGRAMMING SKILLS

Java, Python, JavaScript, C/C++, SQL, Git, Node.js, React, PostgreSQL, Docker, AWS, CI/CD, Linux, Claude Code, Codex

EXPERIENCE

Cisco Systems | Software Engineer Intern | Austin, TX

May 2026 – August 2026

- Developed core features for **Cisco Identity Intelligence**, a security platform serving **1,000+ enterprise clients**, **detecting risky access patterns**, **privilege exposure**, and **attack paths** across human and non-human identities.
- Engineered an **identity-threat detection workflow** using **TypeScript**, **Node.js**, **Snowflake**, and **OpenSearch**, integrating **HR lifecycle data** with **cross-platform access logs** to **flag account access** post-termination, **identifying 100,000+ at-risk accounts** and **saving thousands in persisting service access costs** for enterprise clients.
- Built **full-stack product capabilities** using **React**, **GraphQL**, and **AWS serverless infrastructure**, transforming backend security findings into **responsive dashboards** that streamlined investigation workflows for analysts.

Open Austin | Full-stack Open-Source Development Volunteer | Austin, TX

June 2025 - Present

- Optimized database queries** with **Redis caching** for a property ownership tracking platform, **reducing load times by 45%** while processing 25,000+ ownership records.
- Created an **interactive transit mapping platform** using **Vue.js**, **Express.js**, and **MongoDB**, integrating Google Maps API and GTFS data to visualize points of interest along 50+ bus routes, serving **100+ monthly users**.

PROJECTS

Coffee Connoisseur Platform

July 2025

- Developed a **scalable microservices platform** using **Node.js**, **TypeScript**, **PostgreSQL** with **AI-Powered recommendation via OpenAI API**, supporting 500+ coffee varieties with **real-time Socket.io** features.
- Architected **full-stack application** with **Next.js 14**, **Prisma ORM**, **Redis caching** featuring **AI image recognition**, and containerized with **Docker** on **AWS** to support 1000+ daily requests.

Spring Boot Book Management REST API

May 2025

- Built a RESTful Book Management API with **Spring Boot**, implementing **5 endpoints** with **pagination**, **sorting**, **CRUD operations**, **exception handling**, and **data validation** following REST best practices.
- Achieved **100% test coverage** by writing **unit and integration tests** with **JUnit** and **Mockito**, applying **clean architecture principles** with **Spring Data JPA** to ensure maintainable and reliable API endpoints.

Predictive Dairy Farm Production Model

Dec 2024

- Built a **Linear Regression model** predicting daily milk production with multiple features like temperature, feeding quantity, and session (morning/evening), **optimizing inventory management during production**.
- Conducted **exploratory data analysis** on **Jupyter Notebook**, using **Scikit-Learn**, **PyTorch**, **Numpy**, and **Pandas** to **identify key factors** as the strongest predictors of daily milk production.

AWARDS & LEADERSHIP

Society for Hispanic Professional Engineers – Vice President

January 2026 - Present

- Co-founded** first UHCL SHPE chapter, driving chapter **recruitment** and coordinating regional **meetings**.

NSF S-STEM Scholarship & Conference Speaker

Fall 2023 - Present

- Recurring recipient with **high GPA requirement**. **Nominated** speaker to represent school at NSF conference.
